2009A Release Notes: Schemas Changed

Note: all new elements and attributes are optional and unbounded unless noted otherwise

Notice: The OpenTravel Interoperability Committee approved <u>the removal of all default attribute values from the OpenTravel specification</u> for the 2009A release. A sizable number of OpenTravel messages have been impacted by this major change (as documented in the table below). Many additional messages are affected through inheritance, with the result that this major change impacts all messages with the exception of OTA_SimpleTypes. For historic reference, the deprecated default value is noted in the annotations (using the <LegacyDefaultValue> tag).
